EDUCATION

MVJ College Of Engineering

DEC 2022 - JUNE 2026

Bachelor's of Technology in Computer Science and Design |CGPA - 8.4

Bangalore, Karnataka

Experience

Software Intern-URSC,ISRO

Jan 2026 - Feb 2026

- Developed an **automated, ML-assisted analysis** and reporting tool in Python for multi-parameter datasets, reducing manual data processing and comparison effort by **~70%**.
- Implemented an intelligent feature-pairing and **validation pipeline** to ensure consistent cross-file parameter alignment, enabling faster exploratory analysis and scalable scientific reporting

AI Developer Intern - CHIAC ASI

Feb 2026 - May 2026

- Developed a multi-agent AI system with 4 specialized agents, explicit state management, structured JSON workflows, and observability pipelines, improving **workflow traceability and reproducibility by ~60%**.
- Built a Social Media Trend Monitor capable of **analyzing 1,000+ social media records** using hashtag frequency analysis and visualization dashboards for real-time trend identification.
- Engineered full-stack AI applications using React.js, Node.js, and MongoDB, implementing dynamic workflows, logging systems, and metrics dashboards that reduced manual monitoring and debugging effort by **~50%**.

Projects

Repo Onboarder| Python | FastAPI | Qdrant | scikit-learn | React | Docker

[GitHub](#)

- Built a **RAG** (retrieval-augmented generation) system for querying unfamiliar codebases using Python, FastAPI, and Qdrant, indexing **source code and Git commit history into 2 independent vector collections** with separate TF-IDF embeddings; parsed Python, JavaScript, and TypeScript via AST and tree-sitter, **indexing 200+ chunks in under 5 seconds**.
- Engineered zero-latency regex query routing** (code, commit history, or both) ahead of retrieval and bounded one-hop call-graph expansion, returning file:line or commit-hash citations on every answer.
- Shipped a React 18, TypeScript, and Tailwind interface in a multi-stage Docker build deployed on Render with Groq LLM synthesis.

UndertriAI -Agentic Bail Assessment RL Environment Python | GRPO | HuggingFace TRL

Unsloth | OpenEnv | Meta OpenEnv Hackathon Finalist

[GitHub](#)

- Built a sequential **10-action RL environment training LLMs** to reason through Indian bail cases using **GRPO** via HuggingFace TRL and **Unsloth, deployed on HuggingFace Spaces**.
- Designed a **5-component deterministic reward function** with demographic bias penalty, trained on 1,200 real High Court judgments with measurable reward improvement across **4 curriculum stages**.
- Implemented self-improving curriculum**: agent's high-reward reasoning traces injected as few-shot examples into harder training stages.

TECHNICAL SKILLS

Programming Languages: C,C++, Java, Python,Kotlin,Flutter,Dart

AI & ML: LLM Fine-tuning (LoRA/QLoRA), GRPO/RL Training, RAG Pipelines, HuggingFace TRL, Unsloth, PyTorch, OpenCV

Web Technologies and Databases: JavaScript, Typescript, MongoDB, Firebase,AWS

Frameworks and Libraries: React, Next.js,TailwindCSS,Nuxt.js(vue),Express.js, Node.js,Prisma,Flutter,OpenCV.

Developer Tools: VS Code, Git, GitHub, Postman, Android Studio, Jenkins, Docker, Kubernetes

Concepts: Data Structures & Algorithms, Object-Oriented Programming, Machine Learning, Cloud Deployment, Multi-Agent Systems, Reinforcement Learning .
